

Mathematics Resource Lab

Mathematics lab is a work place for M.Sc (Mathematics Education) students to conceptualize and design mathematical models, activities, ICT embedded tools and mathematical concept based games to make Math learning an enjoyable experience. Students identify mathematical concepts which school students find challenging and difficult to conceptualize or teachers find difficult to concertize. Such concepts are explored and suitable activities, working models and concept specific games are developed to strengthen the concepts or to rectify existing misconception. M.Sc (Mathematics Education) students work on semester long projects in Math lab on innovative Mathematics pedagogy under the guidance of mentors and develop teaching learning resources. Math lab acts as a resource room for mathematics educators, researchers, students and teachers where all stakeholders can visit the place for enrichment.
